## **APS DELIGHT AT SYNERGY CMC LTD'S SUCCESS**

The Association for Project Safety (APS) is delighted to announce that Synergy Construction Management Consultancy Ltd. has become the first training provider accredited to deliver the APS "*Design Risk Management*" course. This course is intended to meet the needs of designers who wish to effectively demonstrate their competence in Design Risk Management in terms of the core criteria set out in the Construction (Design and Management) Regulations 2007. Synergy will not only deliver the accredited course but also tailor courses to meet individual requirements.

Designers who complete the "*Design Risk Management*" course will not only contribute to meeting the requirements of CDM2007 but also enhance their skills as pro-active and integrated members of the design team throughout all stages of the project. The APS considers Synergy's achievement as an important step in complementing the APS course in "*The Management of CDM Co-ordination*" which is also delivered in partnership with a national network of validated training service providers.

Synergy's areas of expertise include project management, risk management; construction related health and safety risk management; design risk management; construction management and value management delivered through tailor made training courses and associated consultancy. The consultancy boasts the expertise of over forty years of experience in the construction sector.

APS Chief Executive Brian Law said:

"I am delighted that we have been able to appoint Synergy Construction Management Consultancy Ltd. as the first training provider to be accredited to deliver the APS "*Design Risk Management*" course. Synergy already has excellent experience as an accredited training provider of the APS course in "*The Management of CDM Co-ordination*" and we are sure that they will excel at delivering the new "*Design Risk Management*" course. This is an excellent first step in developing this important new training course."

Stuart Summerhayes of Synergy Construction Management Consulting added:

"Our appointment as the first accredited training provider of the APS "*Design Risk Management*" course is outstanding news. We think this new course will be of immense benefit in mitigating design risk in the construction sector and we look forward to utilising our previous experience and expertise to make this new course a success."
